

ENERGY MANAGEMENT MATURITY MODEL

Follow these steps to save energy, time, and money!

**START
HERE!**

1.

Energy Manager (EM) gives best effort at promoting conservation & setting HVAC controls.

2.

EM gets a handle on energy information by managing & tracking utility bills & other data sources.

3.

EM enlists the active participation of occupants through no-cost awareness, training & performance reporting.

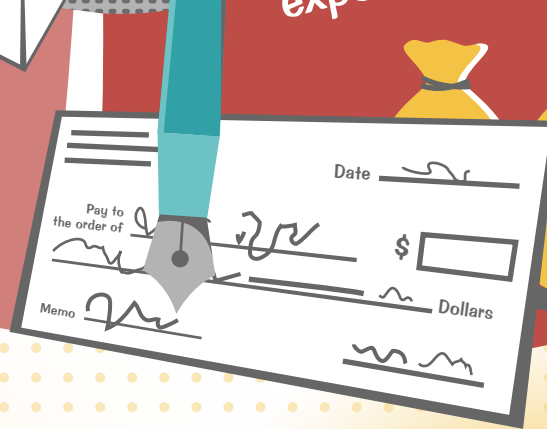

4.

Seeing the results of "do-it-yourself" behavior-based programs, EM finds funding for consultant expertise to enhance them.

5.

EM collects the necessary data & interfaces the utility bill management system with EPA's Portfolio Manager.

6.

EM ensures that energy use that can't be avoided is purchased at the best possible price.

BIG SALE!

7.

EM works with the Accounting Dept. to improve the utility bill payment process.

8.

Skilled consultants are hired to perform periodic energy audits to identify savings opportunities.

9.

Energy Management & Sustainability become a permanent mindset at all levels of the organization.
